

IN THE SPECIFICATION

Please amend paragraph 19 at page 5, lines 6-19, as follows:

Referring now to FIGURE 3, there is illustrated a generalized schematic diagram of the controller 50. The controller 50 preferably includes a microcontroller 54 operably connected to transmitter 52, a digital keypad 56 and to a source of power, such as a battery 58, by way of a suitable voltage regulator [[60]] 59. The microcontroller 52 may be of a type commercially available such as an 8 bit CMOS microcontroller unit with an EEPROM data memory. Such a unit may be operably connected to the keypad 56 wherein pre-authorized multidigit codes may be input to effect operation of the controller 50 to send a suitable signal to the transmitter 52 or via hardwire 51 to base controller 36 to effect operation of a light 33, FIGURE 1, and/or opening or closing of the door 20.
